

Laboratory work 1 (JSON usage)

Task: Get a basic understanding of JSON by using it in the Python programming language. Modify the below given JSON example, using Python code:

- Change firstname and lastname to new value from the provided in JSON
- Add new entry called “Age” to the JSON example

For JSON changes use the Python JSON library. More details:
<https://realpython.com/python-json/>

Example code:

```
import json

x = '{ "firstName": "tester", "lastName": "tester", "city": "Vilnius"}'

# parse x:
y = json.loads(x)

# the result is a Python dictionary:
print(y["firstName"])
```
